India's Largest Boom Pump BSS 46 working on the Residential Project

Putzmeister

The Launch of BSS 46 in India by Putzmeister is in line with its philosophy of opening new Segments & making the latest Technology available to the Indian Customers. The Boom Pump is mounted on a trailer. With trailer configuration, it has opened the era of higher reach Boom Pumps in India which till now were restricted because of non-availability of bigger Truck chassis. The pump is equipped with 5 arms for better reach and maneuverability It has a maximum vertical reach of 45.1m (148ft) and horizontal reach of 41.1m (134ft). It is also equipped with a 140 cum/hr core pump and is mounted on a homologated trailer which is allowed to run on Indian roads.

In the past, Indian Customers faced lot of difficulty to get bigger Boom Pumps for the Projects which require them. They had to import these Boom Pumps & these Pumps were allowed to stay in India only till the completion of the Project. Once the Project was over, the Pumps had to go back. In the past PM also imported 52 M Boom Pump for Project in India, & then shipped it back after the Project was over.

Keeping these in mind, PM India opened the Segment of larger Boom Pumps in the Indian Market by launching BSS 46 which is India's biggest & only 46 m Trailer mounted Boom pump.

BSS 46 is designed according to existing road regulations. Customer does not need special permission to move this Machine. BSS 46 can be pulled by a tractor. Most of the Customers have tractors, which mean that Customers have to invest less in buying this concrete pump. The Unit is designed in such a way that any make of tractor can be used to pull the Unit & it can be taken independently also. Slave Engine of 190 KW Volvo Penta is another feature of BSS 46. It is very Fuel-efficient & there is an Economic Output control system by which RPM of the Engine can be adjusted according to the Load on Machine. Thus it results in higher Fuel efficiency.

The RZ-folding Technology of BSS 46 is very advanced & it helps in quick erection of the Boom & concrete pouring can start immediately.

Besides normal applications, this pump is also very suitable for Infrastructure projects like LNG tanks, Chimneys, Power plants etc.

BSS 46 is seen working on the site of the residential Project being developed by Unitech Developers.

This residential Project is being constructed at Sector -33, Gurgaon, Haryana. The sister concern

of Unitech – Unibild Engg. & Construction Co. is constructing this Project. Unibild also has other PM Machines which Include a 36 M Boom Pump and two Stationary Pumps - BSA1404 D & 1407 D

Overall Site view

Customer speak – “ We have been using Putzmeister Machines for our various Projects. We feel that Putzmeister is the best Concrete pump manufacturing Company in the World. We are very happy to acquire the Largest Boom Pump in India from Putzmeister for the Construction of our Project ”
